List of Figures ix
List of Tables xiii
Acknowledgments xv
About the Author xvi

1. Introduction 1
   1.1 Industrial Ethernet Networks 2
   1.2 Differences between IT Networks and Industrial Control Networks 3
   1.3 Deciding Which Network to Install 5

2. Quick Start 13
   2.1 Understand Your Application Needs 13
   2.2 Understanding the Environment (MICE) 17
   2.3 Evaluate the Building's Grounding System 18
   2.4 Design Your System 19
   2.5 Ordering the Correct Components 20
   2.6 Plan Your Routing 21
   2.7 Install Your System 22
   2.8 Verify the Channel After Installation 23
   2.9 Validate Your System 23

3. Designing Your Network 25
   3.1 Basic Physical Topologies 25
   3.2 Generic Cabling 29
   3.3 Channel Lengths for Generic Cabling 34
   3.4 On Machine Cabling 34

3.5 Rules for Mixing Two-Pair and Four-Pair Cables in a Channel 42
3.6 Grounding and Bonding 42
3.7 Building Wiring Methods 44
3.8 Sources of Protective Earth Currents 47
3.9 Grounding Shielded Cabling 50

4. Environmental Considerations 71
4.1 MICE Tutorial 71
4.2 Understanding the Environment 76

5. Selecting Cabling Components 83
5.1 Copper Cabling 83
5.2 Copper Connectors 99
5.3 Fiber Connectors 105

6. Installation Guidance 109
6.1 Documentation 109
6.2 Routing of Cables 109
6.3 Pulling Cables 111
6.4 Connector Installation 112
6.5 Grounding and Bonding 124

7. Network Verification 129
7.1 Initial Verification Process 129
7.2 Life Cycle of Your Network 129
7.3 Verification Tools 131
7.4 What to Verify 132
7.5 Verification of Grounding and Bonding 134
7.6 Documentation 137

8. Network Certification 139
8.1 Life Cycle of Your Network 140
8.2 Why Certify Your Network 140
8.3 Certification Tools 140
8.4 What to Certify 142
8.5 Documentation 142

9. Troubleshooting the Network 147
9.1 Ground Problems 148
