UHLIG'S CORROSION HANDBOOK

TABLE OF CONTENTS

Foreword
Preface

PART I: BASICS OF CORROSION SCIENCE AND ENGINEERING.
1. Cost of Metallic Corrosion.
2. Economics of Corrosion.
3. Lifetime Prediction of Materials in Environments.
4. Estimating the Risk of Pipeline Failure from Corrosion.
5. Designing to Prevent Corrosion.
6. Simplified Procedure for Constructing Pourbaix Diagrams.
7. Pourbaix Diagrams for Multielement Systems.
8. Galvanic Corrosion.
9. Passivity.
10. Localized Corrosion of Passive Metals.
11. Stress Corrosion Cracking.
12. Hydrogen-Induced Cracking and Sulfide Stress Cracking.
13. Corrosion Fatigue.
14. Flow-Induced Corrosion.
15. Erosion-Corrosion in Single and Multiphase Flow.
16. Gas-Solid Particle Erosion and Erosion-Corrosion of Metals.
17. Thermochemical Evaluation of Corrosion Product Stabilities for Alloys in Gases at High Temperature.
18. Atmospheric Corrosion.
19. Atmospheric Corrosion in Cold Regions.
20. Corrosion by Soils.
21. Microbial Degradation of Materials: General Processes.
22. Corrosion Probability and Statistical Evaluation of Corrosion Data.

PART II: NONMETALS.
23. Corrosion of Refractories and Ceramics.
24. Corrosion of Glass.
25. Microbiological Degradation of Polymeric Materials.
26. Durability of Concrete.
27. Microbiological Corrosion of Concrete.
28. Microbial Degradation of Wood.
29. Use of Chemicals to Prevent the Degradation of Wood.

PART III: METALS.
30. Carbon Steel-Atmospheric Corrosion.
31. Carbon Steel-Corrosion in Fresh Waters.

32. Carbon Steel-Corrosion by Seawater.
33. Carbon Steel-Corrosion by Soils.
34. Localized Corrosion of Iron and Steel.
35. Weathering Steel.
36. Corrosion of Steel in Concrete.
37. Austenitic and Ferritic Stainless Steels.
38. Duplex Stainless Steels.
39. Martensitic Stainless Steels.
40. Aluminum and Aluminum Alloys.
41. Cobalt Alloys.
42. Copper and Copper Alloys.
43. Lead and Lead Alloys.
44. Magnesium and Magnesium Alloys.
45. Nickel and Nickel Alloys.
46. Tin and Tinplate.
47. Titanium and Titanium Alloys.
48. Zinc.
49. Microbiological Corrosion of Metals.
50. Microbiological Corrosion of Metals.
51. Metastable Alloys.
52. Electronic Materials, Components, and Devices.

PART IV: CORROSION PROTECTION.
53. Computer Technology for Corrosion Assessment and Control.
54. Using Plastics, Elastomers, and Composites for Corrosion Control.
55. Corrosion Control of Steel by Organic Coatings.
56. Selection and Use of Coatings for Underground or Submersion Service.
57. Engineering of Cathodic Protection Systems.
58. Stray Current Analysis.
59. Corrosion Inhibitors.

PART V: TESTING FOR CORROSION RESISTANCE.
60. Testing for Environmentally Assisted Cracking.
61. Test Methods for Wet H_2S Cracking.
62. Atmospheric Exposure Tests.
63. Galvanic Corrosion Testing.
64. Testing of Aluminum, Magnesium, and Their Alloys.
65. Testing of Polymeric Materials for Corrosion Control.
66. Corrosion Testing of Refractories and Ceramics.
67. Evaluation and Selection of Corrosion Inhibitors.
68. Practical Corrosion Prediction Using Electrochemical Techniques.
69. Electrochemical Noise.

PART VI: SPECIAL TOPIC: MATERIALS PROBLEMS WITH TEMPORARY AND PERMANENT STORAGE OF HIGH-LEVEN NUCLEAR WASTES.
70. Materials Problems with Temporary and Permanent Storage of High-Level Nuclear Wastes.

Glossary of Selected Terms Used in Corrosion Science and Engineering.

Index.
