CONTENTS

1 Scope 19
2 ~~Normative~~ references 20
3 Terms and definitions 22
3.1 General 22
4 Grouping and classification of intrinsically safe apparatus and associated apparatus 27
5 Levels of protection and ignition compliance requirements of electrical apparatus 28
5.1 General 28
5.2 Level of protection "ia" 28
5.3 Level of protection "ib" 29
5.4 Level of protection "ic" 29
5.5 Spark ignition compliance 30
5.6 Thermal ignition compliance 30
5.7 Simple apparatus 34
6 Apparatus construction 34
6.1 Enclosures 35
6.2 Facilities for connection of external circuits 35
6.3 Separation distances 39
6.4 Protection against polarity reversal 51
6.5 Earth (Ground) conductors, connections and terminals 51
6.6 Encapsulation 52
7 Components on which intrinsic safety depends 53
7.1 Rating of components 53
7.2 Connectors for internal connections, plug-in cards and components 54
7.3 Fuses 54
7.4 Primary and secondary cells and batteries 55
7.5 Semiconductors 59
7.6 Failure of components, connections and separations 60
7.7 Piezo-electric devices 61
7.8 Electrochemical cells for the detection of gases 61
8 Infallible components, infallible assemblies of components and infallible connections on which intrinsic safety depends 62
8.1 Mains transformers 62
8.2 Transformers other than mains transformers 64
8.3 Infallible windings 64
8.4 Current-limiting resistors 65
8.5 ~~Blocking~~ Capacitors 65
8.6 Shunt safety assemblies 66
8.7 Wiring, printed circuit board tracks, and connections 67
8.8 Galvanically separating components 69
9 Diode safety barriers 70
9.1 General 70

9.2 Construction 70
10 Type verifications and type tests 71
10.1 Spark ignition test 71
10.2 Temperature tests 76
10.3 Dielectric strength tests 77
10.4 Determination of parameters of loosely specified components 77
10.5 Tests for cells and batteries 77
10.6 Mechanical tests 79
10.7 Tests for apparatus containing piezoelectric devices 80
10.8 Type tests for diode safety barriers and safety shunts 80
10.9 Cable pull test 81
10.10 Transformer tests 81
11 Routine verifications and tests 82
11.1 Routine tests for diode safety barriers 82
11.2 Routine tests for infallible transformers 82
12 Marking 83
12.1 General 83
12.2 Marking of connection facilities 84
12.3 Warning markings 84
12.4 Examples of marking 84
13 Documentation 86
Annex A (normative) Assessment of intrinsically safe circuits 87
Annex B (normative) Spark test apparatus for intrinsically safe circuits 109
Annex C (informative) Measurement of creepage distances, clearances and separation distances through casting compound and through solid insulation 121
Annex D (informative) Encapsulation 125
Annex E (informative) Transient energy test 129
Annex F (normative) Alternative separation distances for assembled printed circuit boards and separation of components 133
Annex G (informative) United States major deviations 139
Annex H (informative) National Differences Types noted in ANSI/ISA-60079-11 141

Figure 1 – Separation of intrinsically safe and non-intrinsically safe terminals 38
Figure 2 – Example of separation of conducting parts 43
Figure 3 – Determination of creepage distances 47
Figure 4 – Creepage distances and clearances on printed circuit boards 48
Figure 5 – Examples of independent and non-independent connecting elements 52
Figure 6 – Infallible solder connection of surface mount component in accordance with 8.7 c) 3) 69
Figure A.1 – Resistive circuits 90
~~Figure A.2 – Group I capacitive circuits~~ 91
Figure A.3 – Group II capacitive circuits 92

Figure A.4 – Inductive circuits of Group II 93
~~Figure A.5 – Group I inductive circuits~~ 94
Figure A.6 – Group IIC inductive circuits 95
Figure A.7 – Simple inductive circuit 96
Figure A.8 – Simple capacitive circuit 96
Figure A.9 – Equivalent capacitance 108
Figure B.1 – Spark test apparatus for intrinsically safe circuits 113
Figure B.2 – Cadmium contact disc 114
Figure B.3 – Wire holder 114
Figure B.4 – Example of a practical design of spark test apparatus 115
Figure B.5 – Example of an explosion pressure switch 116
Figure B.6 – Example of automatic stopping by means of an explosion pressure switch 117
Figure B.7 – Arrangement for fusing tungsten wires 118
Figure B.8 – Circuit diagram for fusing tungsten wires 119
Figure C.1 – Measurement of clearance 121
Figure C.2 – Measurement of composite distances 122
Figure C.3 – Measurement of creepage 123
Figure C.4 – Measurement of composite creepage 124
Figure D.1 – Examples of encapsulated assemblies conforming to 6.3.4 and 6.6 126
Figure D.2a – Mechanical 127
Figure D.2b – Temperature 127
Figure D.2c – Separation of circuits 127
Figure D.2d – Protection of fuses in an intrinsically safe circuit 128
Figure D.2e – Exclusion of gas 128
Figure D.2 – Applications of encapsulation without enclosure 128
Figure E.1 – Example of test circuit 130
Figure E.2 – Example of output waveform 131

Table 1 – Exclusion of specific clauses of ANSI/ISA-60079-0 ~~IEC 60079-0~~ 19
Table 2 – Assessment of temperature classification according to component size and ambient temperature 31
Table 2a) – Requirements for T4 ~~and Group I~~ 31
Table 2b) – Variation in maximum power dissipation with ambient temperature for components not less than 20 mm^2 31
Table 3 – Temperature classification of copper wiring (in a maximum ambient temperature of 40 °C) 32
Table 4 – Temperature classification of tracks on printed circuit boards (in a maximum ambient temperature of 40 °C) 33
Table 5 – Clearances, creepage distances and separations 42
Table 6 – Minimum foil thickness or minimum wire diameter of the screen in relation to the rated current of the fuse 63

Table 7 – Compositions of explosive test mixtures adequate for 1,0 safety factor 72
Table 8 – Compositions of explosive test mixtures adequate for 1,5 safety factor 74
Table 9 – Routine test voltages for infallible transformers 83
Table 10 – Text of warning markings 84
Table A.1 – Permitted short-circuit current corresponding to the voltage and the apparatus group 97
Table A.2 – Permitted capacitance corresponding to the voltage and the apparatus group 102
Table A.3 – Permitted reduction of effective capacitance when protected by a series resistance 108
Table F.1 – Clearances, creepage distances and separations for level of protection ”ia” and “ib” when ingress protected, and special conditions of material and installation are fulfilled 137
Table F.2 – Clearances, creepage distances and separations for level of protection”ic” when ingress is protected by an enclosure or by special conditions of installation 138
