Table of Contents

1 Purpose 11
2 Scope 11
3 Definitions 11
4 Process measurement requirements 14
4.1 Instrument installations for superheat and reheat steam temperature control 14
4.2 Design of thermocouples and temperature sensors 14
4.3 Isolation valves and impulse lines 14
4.4 Process measurements for superheat and reheat steam temperature control 14
5 Attemperation methods – Control and logic requirements for an attemperator control system for control of steam temperatures 16
5.1 Single-stage attemperation 16
5.2 Two-stage attemperation 17
5.3 Multiple-stage attemperation 18
5.4 Attemperator spray and block valve logic 19
5.5 Saturation protection 19
6 Control and logic requirements for a reheat steam temperature control by means of heat distribution 20
6.1 Fuel nozzle tilts 20
6.2 Flue gas pass dampers 20
6.3 Flue gas recirculation 21
6.4 Single-stage spray water attemperation 21
7 Superheat control and logic requirements for once-through type boilers 22
7.1 Firing rate-feedwater flow ratio control 22
7.2 Attemperator control 23
8 Common design requirements 23
8.1 Automatic tracking 23
8.2 Integral windup prevention 23
8.3 Final control element requirements 23
8.4 System reliability and availability 24
8.5 Minimum alarm requirements 24
8.6 Operator interface 24
Annex A — References 27
Annex B — Steam temperature control 29
B.1 Purpose 29
B.2 Introduction 29
B.3 Requirements 30
B.4 Principles and methods of steam temperature control 32
B.5 Saturation protection/water induction protection 33
B.6 Two-stage attemperation 34
B.7 Use of cascade spray valve control 34
