TABLE OF CONTENTS

Unit 1: Introduction and Overview 1
1-1. Course Coverage 3
1-2. Purpose 4
1-3. Audience and Prerequisites 4
1-4. Study Materials 4
1-5. Organization and Sequence 4
1-6. Course Objectives 5
1-7. Course Length 6

Unit 2: Feedback Controllers 7
2-1. The Feedback Control Loop 9
2-2. Proportional, Integral, and Derivative Modes 13
2-3. Typical Industrial Feedback Controllers 19
2-4. Stability of the Feedback Loop 22
2-5. Determining the Ultimate Gain and Period 24
2-6. Tuning for Quarter-decay Response 25
2-7. Need for Alternatives to Ultimate Gain Tuning 31
2-8. Summary 32

Unit 3: Open-Loop Characterization of Process Dynamics 35
3-1. Open-Loop Testing: Why and How 37
3-2. Process Parameters from Step Test 39
3-3. Estimating Time Constant and Dead Time 41
3-4. Physical Significance of the Time Constant 45
3-5. Physical Significance of the Dead Time 49
3-6. Effect of Process Nonlinearities 52
3-7. Testing Batch Processes 55
3-8. Summary 56

Unit 4: How to Tune Feedback Controllers 59
4-1. Tuning for Quarter-decay Ratio Response 61
4-2. A Simple Method for Tuning Feedback Controllers 64
4-3. Comparative Examples of Controller Tuning 65
4-4. Practical Controller Tuning Tips 74
4-5. Reset Windup 77
4-6. Processes with Inverse Response 78
4-7. Summary 81

Unit 5: Mode Selection and Tuning Common Feedback Loops 83
5-1. Deciding on the Control Objective 85
5-2. Flow Control 86
5-3. Level and Pressure Control 88
5-4. Temperature Control 94
5-5. Analyzer Control 96
5-6. Summary 97

Unit 6: Computer Feedback Control 99
6-1. The PID Control Algorithm 101
6-2. Tuning Computer Feedback Controllers 108
6-3. Selecting the Controller Processing Frequency 115
6-4. Compensating for Dead Time 117
6-5. Summary 121

Unit 7: Tuning Cascade Control Systems **125**
7-1. When to Apply Cascade Control 127
7-2. Selecting Controller Modes for Cascade Control 130
7-3. Tuning Cascade Control Systems 131
7-4. Reset Windup in Cascade Control Systems 139
7-5. Summary 142

Unit 8: Feedforward and Ratio Control **143**
8-1. Why Feedforward Control? 145
8-2. The Design of Linear Feedforward Controllers 150
8-3. Tuning Linear Feedforward Controllers 152
8-4. Nonlinear Feedforward Compensation 157
8-5. Summary 164

Unit 9: Multivariable Control Systems **167**
9-1. What Is Loop Interaction? 169
9-2. Pairing Controlled and Manipulated Variables 173
9-3. Design and Tuning of Decouplers 183
9-4. Tuning Multivariable Control Systems 188
9-5. Model Reference Control 191
9-6. Summary 194

Unit 10: Adaptive and Self-tuning Control **197**
10-1. When Is Adaptive Control Needed? 199
10-2. Adaptive Control by Preset Compensation 202
10-3. Adaptive Control by Pattern Recognition 209
10-4. Adaptive Control by Discrete Parameter Estimation 212
10-5. Summary 220

Appendix A: Suggested Reading and Study Materials **223**

Appendix B: Solutions to All Exercises **227**

Index **251**
