

EXPO 2007

2-4 October
Reliant Center, Houston, TX

Environmental Pavilion

Showcasing solutions for the environmental side of control

Environmental Pavilion exhibitors offer solutions for the many complex issues faced by manufacturers as they comply with environmental regulations, meet their own factory's guidelines, and protect their natural surroundings while constantly working to increase production and efficiency.

"Environmental Monitoring and Control" and "Energy Management Systems" **accounted for 2 of the top 3** products and services most requested by ISA EXPO 2006 attendees. The **Environmental Pavilion** is a high-profile showcase for continuous emissions monitoring (CEM), opacity, energy management, environmental controls, water/waste-water issues, particulate monitoring, air pollution, water pollution, analyzers, CO, O₂, NO_x, SO_x, CO₂ monitoring, alarms, data logging and related products.

Manufacturing must operate more efficiently and safely than ever before, leaving the lightest possible footprint on the external and internal environment – and you can help.

If your company focuses on the environmental side of process control or discrete manufacturing, exhibit in this specialty pavilion and help attendees find your environmental solutions.
