

Table of Contents

<i>Part A. Introduction</i>	1
Chapter 1. Purpose of This Book	3
Can This Book Tell Me Which Control System I Should Buy?.....	3
Will This Book Tell Me How to Find Out?.....	4
To Start, You Must Look at the Issues	4
There Must be Goals for Improving a Plant Control System.....	5
Dilemmas to Resolve Using Distributed Processor Systems.....	8
Control Systems: Discrete vs. Process	9
Chapter 2. Evolution of Plantwide Process Control	11
Early Control of Processes	11
Beginnings of Local Control Room Panels	11
More Sophisticated Control Rooms.....	12
Central Mainframe Computer Control	12
Distributed Process Control	15
Distributed Processor Systems—A Collection of Computers.....	16
Role of Programmable Logic Controllers (PLCs) in Process Control	17
Comparing DCS with PLC for Ease of Configuration	21
An Imperfect Report Card	24
Hybrid DCS and PLC Architectures	24
SCADA Systems	26
Increasing Role of Personal Computers (PCs).....	28
The Issue Is Real-Time	28
Impact of Windows NT	29
Using PC for Control	30
Chapter 3. The Nuts and Bolts of Computing Devices	33
Electronic Circuitry	33
Large-Scale Integrated Circuits	33
Basic Training Camp Analogy	34
How Microprocessors Function	35
Processing Speed: Not Always the Processor.....	36
Clock Speed: Keeping Everything in Time.....	37
Brief History of Microprocessors.....	37
Coprocessors.....	38
Memory Devices	38
<i>Part B. Controllers</i>	43
Chapter 4. Controller Hardware Structures	45
Traditional Process Controllers	45
Architectures of Controllers	46

Chapter 5. Controller Software Structures	51
Programming	51
Organizing Execution Time for Control Action	52
Software Structure Advances.....	55
Programming vs. Configuration	55
Function Blocks.....	56
Object-Oriented.....	57
Connecting the Blocks	58
Changing Control Strategy	60
Chapter 6. Controller Redundancy	65
“Single Loop Integrity” Myth	65
Redundant Mainframe Computers	66
Microprocessor-Based “Shared-Loop” Redundancy.....	66
Microprocessor-Based Redundancy in “Single Card” Controller Racks	68
Windows NT as Controller	70
Power Interruptions	71
Chapter 7. Connections to the Controller	73
Input/Output Subnetworks to Field Devices	73
Digital Conversion of Inputs and Outputs	74
Remote Input/Output Connections	76
Influence of Fieldbus	79
Input/Output Subnetworks to Humans	80
X Windows	82
X-Window Architecture	84
Incorporating X Windows in a Control System.....	84
Customer Response	85
<i>Part C. Human Interfaces.....</i>	89
Chapter 8. Humans in Control	91
The Process of Control	91
Brown’s Instrument for Repeatability	92
Touring the Plant with All the Senses	92
Indications for Control of Process—Blame the Early Railroads.....	94
Back to Control Room Panels.....	95
Chapter 9. Video for User Interfaces	97
Video Display Workstations	97
The Future Continues to Develop	99
“Look and Feel”	101
Role of Workstations Is Also in Transition	103
Chapter 10. Adjusting Technology to Fit—Use the Medium	105
Theater	105
Black and White Cinema	106
Black and White Cinema with Sound.....	106
Color Cinema.....	107
Radio.....	107
Television	107
Life Is Not Just Video Games	108

Chapter 11. Video Monitor Hardware	111
Screen Size and Resolution.....	111
Raster Graphics	112
Vector Graphics.....	113
The Future of Cathode Ray Tubes (CRTs).....	114
Much More to Video Monitors	115
Chapter 12. Exploring Displays	121
Windowing.....	121
Zooming	122
Panning.....	123
Video Wall	124
Functions of Overview	124
Functions of Group View	125
Functions of Point Detail Display.....	127
Additional Views	128
Chapter 13. Trending Data Through Video	131
Beyond Immediate Values	131
Using Trend Displays.....	132
Analog Value Trending (Figure 13-3)	134
Discrete Value Trending (Figure 13-4)	135
Uses for Trend Cursor (Figure 13-5).....	135
Trend Navigation (Figure 13-6)	135
Some Trend Guidelines	137
History, Archiving, and Record-Keeping Subnetworks.....	137
Off-Line Storage of Data.....	138
Chapter 14. Communication of Information.....	143
Interacting with Processes	143
Time As a Parameter—Analog or Digital?	144
Display Elements	146
Use the Full Potential of Graphic Creation.....	148
Chapter 15. Video Screen Animation	149
Dynamic Displays	149
IF-THEN-ELSE Statements for Screen Dynamics	150
On Constructing Mimic Displays.....	151
Color As a Dynamic	152
Combined Capabilities	152
Considerations for Color Use	154
What Colors Should I Use?	155
Not All Systems Are Alike	156
Chapter 16. Screen Navigation	159
Video Screen Access Tools.....	159
Keyboards.....	160
Keystroke Actions	162
Keystroke Feedback	163
“Soft Keys”.....	164
Keyboard Role	165

To Seal or Not to Seal?	166
Mouse or Trackball.....	167
Touch Screen Access Tools.....	167
Selecting through Touch Screen Targets	168
Touch Screen Considerations.....	169
Vibration.....	169
Navigational Designs	170
Entries for Control.....	171
Audio Access in the Control Room	172
Voice Commands	173
Pretty Girls in the Airport.....	173
Control Room Lesson from the Girls.....	174
Chapter 17. Human Information Processing.....	175
How We Think and Do.....	175
Think of the Interface.....	177
Differentiate User Needs	177
Operator Action Philosophies	177
Intuitive versus Learning by Rote	179
Range and Uses of Operator Interfaces	179
More Philosophical Issues	181
Human Factor Considerations	181
Design Conflicts	182
Menu Structure Guidelines.....	183
Display Organization and Content	184
Hierarchies of Views	188
Borrow from Video Games.....	190
The Operator's Perception Is Reality!	191
What About Control Rooms?.....	192
Operator Interfaces Outside the Control Room.....	194
Business Views of Processes?	194
<i>Part D. Plant Upsets</i>	<i>197</i>
Chapter 18. Working With Alarms	199
Architectural Considerations for Alarm Management.....	199
State versus Condition.....	200
Speed of Operator Response	202
Managing Alarms	202
Chapter 19. Alarm Choices	205
Alarm Choices	205
Alarm Priority	205
Alarm Qualifiers.....	206
Alarm Cutouts.....	207
Alarm Actions	207
Chapter 20. Alarm Structures and Hierarchies	209
Alarm Access	209
Alarm Management.....	210
Alarm Views	211

Alarm Group.....	212
Alarm Sequence Summary List	212
Operator Actions.....	213
Evaluating Alarm Structures	213
Alarm Philosophy and Other Thoughts.....	215
Chapter 21. Overall System Display Structures.....	217
Dilemma of Flexibility	217
Important Rule for Constructing Display Structures.....	218
Use of “Always-on-top” Screens.....	218
Simplified Hierarchy.....	221
Navigation through Hierarchies	222
<i>Part E. Networks</i>	<i>225</i>
Chapter 22. More Nuts and Bolts.....	227
The Nature of Digital Communication	227
Data Highways and Dirt Roads	229
Information Transmission	229
Parallel versus Serial	230
Interference with Transmission	231
Chapter 23. Physical Structures	235
Network Topologies.....	235
Star Topology	237
Bus Topology.....	238
Ring or Loop Topology	238
Network Cable	238
More on Fiber Optics	240
Chapter 24. Logical Structures	245
Message Format	246
Media Access Protocols	248
Media Access Analogies.....	249
Ethernet	251
Token Passing.....	251
The Conquest of Speed	252
Turnaround Time	253
Media Access Time	255
Future of Ethernet	256
Ethernet Advantages.....	257
Overcoming the Shortcomings	258
Let’s Not Get Carried Away	258
Emerging Technologies of the Late 1990s	260
Compatible versus Compliant Standards.....	261
Chapter 25. Open Communications Standards.....	263
Open Systems: What Are They?.....	263
Why Are Open Systems Important?	265
Advantages and Disadvantages	266
Fallacy About Standards.....	268
Developing Standardized Links: The Ubiquitous RS-232.....	268

Communications Structure: The Open Systems Interconnect Model.....	269
Enhanced Performance Architecture (EPA)	273
Shortcuts Between Networks.....	273
Some Other Communications Standards.....	275
Communicating Between Software Applications: DDE	276
Communicating Between Software Applications: OPC	278
Competing Objects to Link Applications	280
Communication from Afar.....	281
Spread Spectrum Radio Technology	282
Cellular Phone Technology	284
Chapter 26. Digital Field Communications	285
Why Digital Field Communications?	285
Advantages of Fieldbus.....	291
Interoperability and Interchangeability.....	293
Differentiating Fieldbus Vendors.....	293
How Fieldbus Works	294
The Fieldbus Foundation.....	297
Chapter 27. Architectural Issues	299
Impact of Control Strategy on Architecture.....	299
Impact of Advanced Control	299
Dilemma of Multiple Vendors	300
Connection to External Hardware.....	301
Interfacing External Devices—More Nuts and Bolts	302
Integrating External Hardware into the Data Base	305
Links to Integrate with Plantwide System	305
<i>Part F. Connecting the Enterprise</i>	307
Chapter 28. Succeeding in the Business	309
Managing the Enterprise.....	309
Defining Functions	313
The Challenge of Two Computing Communities	317
Challenge of S95	318
Combining Business and Control Architectures	319
Chapter 29. Plant Information	327
Flow of Data	327
Timing is Everything.....	329
Data Management.....	330
Manipulating Data	335
More Reality	336
<i>Part G. The Process</i>	337
Chapter 30. Continuous Processing.....	339
Moving Toward Configuration	339
Three Modes?	341
Limits to Creating Good Control	341
Management Disturbs Control	343
Building Control Strategy	345

Creative Control Saves Money.....	347
Chapter 31. Discontinuous Processing.....	351
What Sets Batch Manufacturing Apart?	351
Batch Operations Challenge.....	353
A Standard Helps to Overcome Needs	353
Model for S88 Process Automation Model for Batch Operations.....	355
Procedural Control Model	357
Recipe Model.....	358
Crossing the Line between Enterprise and Process Control	359
Chapter 32. Toward Standardizing Configuration.....	361
Benefits of Configuration Standard	361
Who Is the IEC?	362
Standard IEC 61131-3 Languages.....	363
System Model Diagram	364
Function Block Diagrams	365
Ladder Logic Diagrams	367
Sequential Function Charts (SFCs)	368
Structured Text	373
Instruction List	373
Mixing Languages	374
<i>Part H. System Security</i>	<i>377</i>
Chapter 33. Risk of Failure	379
Dependability	379
System Integrity.....	380
Fault Prevention	380
Fault Tolerance	381
Task Partitioning.....	382
Redundancy.....	383
Software Backup.....	384
Hardware Backup	385
Power Sources.....	386
Spare Parts	387
Cost of Failure	388
Chapter 34. Measuring Deficiency	389
Time Dependent Behavior	389
Measure of Reliability	390
Mean-Time-Before-Failure Myth.....	392
Change in Availability and MTBF Definitions	393
Chapter 35. Nature of Failures	395
Types of Faults.....	395
Attributes of Failure.....	396
Failure Sources	397
Design Faults	397
Manufacturing Faults	397
Environmental Faults	398
Mechanical Environment.....	398

Moisture and Corrosion.....	399
Maintenance Faults.....	400
Common-Cause Failures.....	400
Chapter 36. Finding Fault.....	403
Diagnostics	403
Processor Cards	405
Memory Cards	406
Communication Between Cards on a Backplane	407
Communication Between Cards on a Long Bus	407
Communications Between Stations on a Network.....	408
Nondeterministic Communications	408
Deterministic Communications.....	409
Network Security Using Redundancy.....	410
Network Security Using Transaction Types	410
Network Security with Error Detection	411
Network Security Using Fiber Optics.....	412
System-Level Considerations	412
Chapter 37. Operational Security	415
Operational Consistency	415
Operation Access Security.....	416
Chapter 38. Systems For Process Safety.....	419
Failure Effects	419
Fault Avoidance	420
Safety Systems.....	421
Living with Safety Systems	421
Safety Programmable Logic Controllers	423
<i>Part I. Typical Vendor Architectures.....</i>	427
Chapter 39. Older Examples.....	429
Vendor Architectures—Never Stagnant!	429
How Vendors Use These Architectures	446
Selecting an Open System	447
<i>Part J. Control System Implementation</i>	449
Chapter 40. Justification.....	451
System Considerations.....	451
What Is the Purpose of This Specific Control System?	452
Production.....	452
Consistency	452
Efficiency	452
Safety of Personnel, Plant, and Product	453
Cost	453
Mission Statement	453
Develop a Plan.....	453
Chapter 41. Preparation and Definition	455
The Team Members.....	455
Defining the Project	456

Who Implements.....	457
What Goes Where?	458
Defining Process Interface	459
The Nature of Your Control System.....	460
Change is Constant.....	461
Operator Interfaces	462
Environments	463
Equipment Room.....	463
Distributed Equipment	465
System Power	466
Grounding	466
Physical Considerations.....	467
Training and Assistance.....	467
Chapter 42. Specification	469
Writing the Specification.....	469
The Wish List	472
Prescreening Vendors	473
Trivia Quizzes	474
Terminology	474
Specification Outline	476
Chapter 43. Selection Process	479
Comparing Vendors	479
Evaluating Quotations	481
Evaluating Input/Output Capabilities.....	482
Evaluating Control Configuration Capabilities	483
Evaluating Operator Interface Capabilities.....	484
Evaluating Network Capabilities	485
Evaluating System Security	486
Evaluating Installation & Maintenance Capabilities.....	487
A Method to Organize Vendor Comparison.....	488
Vendor Evaluation Meetings.....	514
Chapter 44. The System has been Bought!.....	515
Project Kickoff Meetings	515
Meeting Tracking System	516
System Master Inventory	517
Project Status Meetings	518
Technical Review Meetings.....	518
Internal Meetings.....	518
Factory Testing	519
Shipment of the System.....	521
Installation	522
The Project Is Over	523
Continual Improvement	524
<i>Part K. Why Distribute My Control?</i>	<i>525</i>
Chapter 45. Selling Change.....	527
An Outline of Arguments for Distributed Control.....	527

<i>Part L. Future Trends</i>	531
Chapter 46. Distributed Ain't Dead!!	533
Distributed Processor Systems for Control	533
Maturing of Technology Allows Maturing of Application	533
Control Loops Stretched Out Over the Network	534
Information Distribution—How Much and How Fast?.....	535
Observation, Decision Making, and Intervention	536
Chapter 47. Market Domains	537
Changes in Capability Spawns Changes in Function— and Traditional Domains.....	537
Changes in Domain Make Traditional Market Identifications Very Difficult	539
Expanding Role of “Personal Computers” (PCs)	539
What's in a Name?	541
Bibliography	543
Glossary, Acronyms, and Abbreviations:	
Beyond Distributed Process Control	545
Vendor-Specific Acronyms: DCS	699
Index	715
