

Good Tuning: A Pocket Guide

By Gregory K. McMillan

ISA—The Instrumentation, Systems and Automation Society

Table of Contents

Chapter 1.0—Best of the Basics	1
1.1 Introduction	1
1.2 Actions Speak Louder than Words	2
1.3 Controller à la Mode	6
1.4 Is That Your Final Response?	7
1.5 The Key to Happiness	30
1.6 Nothing Ventured, Nothing Gained	34
1.7 Process Control as Taught versus as Practiced	42
Chapter 2.0—Tuning Settings and Methods	43
2.1 First Ask the Operator	43
2.2 Default and Typical Settings	43
2.3 The General-purpose Closed-loop Tuning Method	47
2.4 The Shortcut Open-loop Method	53
2.5 Simplified Lambda Tuning	58
2.6 Set Point Response and Load Rejection Capability	62

Chapter 3.0—Measurements and Valves.....	63
3.1 Watch Out for Bad Actors	63
3.2 Deadly Dead Band	64
Chapter 4.0—Control Considerations.....	75
4.1 Auto Tuners.....	75
4.2 Uncommonly Good Practices for Common Loops	75
4.3 Dead-Time Compensation and Warp Drive.....	78
4.4 I Have So Much Feedforward, I Eat before I Am Hungry	82
4.5 Cascade Control Tuning.....	85
4.6 Keep the Secondary Loop on the Move	88
Chapter 5.0—Troubleshooting	89
5.1 Patience, Heck, I Need to Solve the Problem.....	89
5.2 Great Expectations and Practical Limitations.....	97
Index	103
