Setting the Standard for Automation™

Certification: A Key Tool for Success

ISA's Certified Control Systems Technician® (CCST®) program promotes the professional development of control systems technicians by recognizing and documenting knowledge, experience, and education in automation and control, and by providing a measurable qualification for hiring and promotions.

The CCST exams are based on a national job analysis study of control systems technicians that identified seven performance domains as critical knowledge and skill areas for control systems technicians.

The development of a valid certification examination began with a clear and concise definition of the tasks, knowledge, and skills needed for competent job performance.

Using interviews, surveys, observation, and group discussions, ISA worked with control systems technicians and supervisors to delineate critical job components. The knowledge and skill bases for the questions on the examination were derived from the actual practice of control systems technicians as outlined in the CCST Role Delineation Study.

CCST test specifications were developed by combining the overall survey evaluations of importance, frequency, and criticality, and converting the results into percentages. Importance, frequency, and criticality ratings were weighted equally in this computation. These percentages are used to determine the number of questions related to each domain and task, as shown in the accompanying table.

"The CCST exam tests your knowledge and skills in the areas critical to what we do as control systems technicians...And you can test at the level that you qualify for."

—Ward Schultz, CCST III, Emerson Process

CCST Performance Domains and Test Specifications

Domain	Percent of questions appearing on the exam		
	Level I	Level II	Level III
I. Calibration	31%	22%	19%
II. Loop Checking	21%	14%	13%
III. Troubleshooting	32%	22%	21%
IV. Start-up	16%	12%	11%
V. Maintenance/Repair	n/a	20%	20%
VI. Project Organization	n/a	10%	8%
VII. Administration	n/a	n/a	8%

The percentage of questions per domain is based on each domain's relative importance and criticality in terms of what control systems technicians are expected to know while performing their jobs. The table indicates the percentage of questions appearing on the exams by level and by domain.

The CCST Program offers three levels of certification based on a technician's experience, education, and training. **Technicians can begin testing directly at the level for which they can meet the requirements**

CCST certification has been popular with technicians and managers looking for an objective way to measure the skill level of control systems technicians. More than 9,000 technicians have applied for certification and nearly 4,000 are now certified.

"Every industry is different. We all have jobs we do every week, and some we never do. The CCST certification evens that out. It gives a tech working in any industry the ability to prove skills and knowledge applicable in all industries. The three-level structure recognizes growth and development in a tech. As one moves up through level 2 and 3, confidence and professionalism grow."

—Andy Crowley, CCST III, DELCORA

Managers: Maintain Your Competitive Edge

As an automation and control manager, you understand workplace challenges: intensifying competition, the need to increase efficiency, and pressure to recruit and maintain experienced employees. To maintain your competitive edge, your company needs highly skilled and certified employees—**ISA CCSTs**.

Document your technicians' skills. Third-party certified technicians demonstrate your company's commitment to meeting federal guidelines and fulfilling ISO9000 requirements.

Increase your company's credibility. CCSTs expand your company's bidding and service values, which ultimately increases your company's bottom line. Third-party endorsement and documented certification help your company stand out in the marketplace.

Establish documentable hiring and promotion criteria. Strengthen your workforce and company image by requiring documentation of experience, knowledge, and skills of new hires, current employees, and technicians provided to work on your outsourced projects.

Maintain a safe workplace. Technicians have direct control over operations that affect product quality. CCSTs are more likely to get it done right the first time.

"An ISA CCST certified technician has the knowledge and experience to handle the job. They have demonstrated their understanding of the fundamentals of Control Systems over a wide variety of areas in a challenging examination. As a manager, this gives me assurance that I've made the right choice."

—Frank Beaty, CCST III, G and F Services, PLLC

Technicians: Demonstrate Your Commitment to Your Profession

Demonstrate your commitment to the automation profession, to your company, and to your career in automation by becoming a **Certified Control Systems Technician**.

Establish your professional credentials and enhance the profession's image. The CCST program seeks to grow, promote, and develop technicians who can stand out as examples of excellence in the field, by serving as an impartial, third-party endorsement of your knowledge, skills, and experience.

Exhibit your personal achievements, gain peer recognition, and build self-esteem. Achieving CCST status demonstrates your competence by confirming proficiency, career involvement, and knowledge, providing you with a deep sense of personal satisfaction and kudos from your colleagues for your dedication to professional development.

Enhance knowledge and skills and prepare for additional job responsibilities. CCSTs have displayed excellence in automation and control by fulfilling requirements set by ISA, demonstrating their ability to take on more responsibility.

Improve your career opportunities and increase your chances for greater earnings. CCST certification gives you an extra edge when being considered for promotions and other career opportunities as more employers move towards requiring CCST certification.

"I became an ISA Certified Control Systems Technician to demonstrate my knowledge, skills, and commitment to my career, and I highly recommend becoming a CCST to other technicians looking to enhance their careers."

—George Lister, CCST III, Texas Tech

How to Become a CCST

- 1 Review the CCST Body of Knowledge and read the CCST Program Handbook available at www.isa.org/CCST or by calling (919) 549-8411.
- 2 Evaluate your years of experience, education, and training to determine the CCST level that you are qualified to apply for.
 - Level I** requires a minimum of five years experience, education, and/or training in instrumentation, measurement, and control, or related experience in electronics, electrical, and mechanical fields. Successfully completing the **CST Associate** exam equals one year of experience that counts toward the Level I CCST requirements. To learn more about CST Associate visit www.isa.org/cert/cstassociate.
 - Level II** requires seven years experience, education, and/or training, with at least two years specifically in instrumentation, measurement, and control.
 - Level III** requires thirteen years experience, education, and/or training, with at least five years specifically in instrumentation, measurement, and control.
- 3 Download the CCST application found at www.isa.org/CCST/apply. Secure the necessary paperwork to complete the application, and send to ISA.
- 4 Prepare for the exam using ISA or other study materials. Information on preparation materials can be found at www.isa.org/CCST/prepare.
- 5 Take and pass the exam. For details on electronic testing center locations as well as paper and pencil exam options visit www.isa.org/examschedule.

"My company is a big supporter of CCST, and since I do not yet qualify for CCST Level I, I applied for the ISA CST Associate program. This program is an excellent stepping stone on the path to becoming a Certified Control Systems Technician because passing the CST Associate exam counts as one year of experience towards the CCST Level I requirements. For anyone planning to become a CCST that does not yet qualify for Level I, this is an opportunity you can't pass up."

—Aaron Brodhacker, Burns and Roe Services Corp.

Get Certified

With electronic testing, getting certified is faster and easier than ever before! You can take the CCST exam at one of our electronic testing locations—located around the world—when and where it's most convenient for you. And you'll get your pass/fail status immediately!

“ISA’s CCST program distinguishes those skilled technicians that are highly motivated and engage in self-improvement, either for simple self-satisfaction or for greater career and professional advancement. CCST also provides them a source of credibility with fellow colleagues and management alike. Our plant requires a minimum of a CCST Level I for the technicians, and recognizes and values the level II & III CCSTs when it comes to career advancement.”

—David Taylor, CCST III, Rohm & Haas

Apply for CCST Certification Today!

1. Read ISA's CCST Program Handbook.
2. Determine the CCST level that you are qualified to apply for.
3. Document your work and education experience.
4. Complete and return the application.

Visit www.isa.org/CCST/apply to learn more about applying for CCST Certification.

How to Prepare for CCST Certification

ISA provides *study guides, books, standards, and training courses* to help CCST applicants prepare for the exam.

For more information on available resources, go to www.isa.org/CCST/prepare, or contact ISA at CCST@isa.org or (919) 549-8411.

CCST Benefits to Technicians

- Establish your professional credentials.
- Exhibit your personal achievements.
- Enhance knowledge and skills and prepare for additional job responsibilities.
- Improve your career opportunities and increase your chances for greater earnings

For more information go to www.isa.org/CCST/tools, or contact ISA at CCST@isa.org or (919) 549-8411.

CCST Benefits to Managers

- Document your technicians' skills.
- Increase you company's credibility.
- Establish documentable hiring and promotion criteria.
- Maintain a safe workplace

For more information go to www.isa.org/CCST/tools, or contact ISA at CCST@isa.org or (919) 549-8411.
