Meeting Date: 7 May 2008

Place: BRADY'S LANDING

8505 Cypress, Houston, 713-928-9921

Time: Social Hour & Cocktails: 5:30PM Dinner: 6:30PM Speaker: 7:30PM

Topic: Modular Sample System Solutions

Speaker: Ken Backus-Swagelok Field Engineer

Dinner: \$12 advance, \$15 at door

RSVP: Call or email Mary Jo by 6 May at

713-621-6486 or maryjo@houstonanalytical.com

Hello Everyone!

What a wonderful Spring we have enjoyed this year. The coming year has many interesting presentations. Our May meeting will cover Modular Sample System Solutions. Please note our 2008 calendar for upcoming program dates. Both evening and afternoon meetings will be a part of this year. See you at Brady's Landing.

Take care, The Editor

May Guest Speaker Biography

Originally from Columbus, OH, Ken lived in Granada Hills, CA and Cocoa Beach, FL; graduated BSc in Marine Engineering from US Merchant Marine Academy, Kings Point, NY.

Ken worked as a design and systems engineer for Brown & Root, Newsco, and Baker CAC in pipeline and production industries, and was Business Development Manager for Tyco Engineering in UK on C&I applications, including process and analytics in upstream and downstream projects offshore in the North Sea, and in India, Pakistan, Azerbaijan, Kazakhstan, Canada and the UAE.

He joined Swagelok in 1991 as Market Specialist, later becoming Product Manager, Process Instrumentation. He relocated to Houston as Field Engineer in 2004, specializing in control, process instrumentation and analytical applications.

Ken is married to Narmin, and has two daughters.

Presentation Abstract

As the analytical industry turns more and more toward modular solutions in the face of a skills crisis, Swagelok has taken a new look at stream selection. With cross-contamination threatening the integrity of analyzer results, modular double block and bleed solutions for both normal service and high acid or caustic applications have presented better options to the analyzer engineer.

California Analytical Instruments, Inc. has been a premier provider of quality gas analyzers and systems for use in industrial, process, environmental and automotive emissions measurement applications for over 15 years. Our analyzers and systems are capable of monitoring a library of over 1,000 components with detection levels from ppb to percent. CAI utilizes several detection methods such as **Infrared, FID, Chemiluminescence, and Photo Acoustic Infrared Spectroscopy.**
