Subject: Honeywell Application Interface Layer Basis Specification

Dear Mr. Lee:

Honeywell International Inc. is committed to helping automation professionals around the world find the best solutions in building, operating and maintaining complex industrial systems. Honeywell is dedicated in insuring automation interoperability by working with the industry to develop and maintain open specifications that standardize communications between various measurement and control devices. Honeywell Process Solutions along with other automation companies and professionals, through the ISA, is currently engaged in developing the SP-100 standard for wireless sensors, controls and automation.

To insure that the SP-100 standard provides universality between devices and applications, Honeywell is announcing that it will make available to the ISA, for incorporation into the ISA SP-100 standards, the basis specifications to implement and develop an Application Interface Layer (AIL). Currently, Honeywell holds no issued patents for the Honeywell developed AIL basis specification. However, Honeywell will follow the American National Standard Institute Patent Policy 3.1.1 if any essential patents issue for the AIL in the future.

Regards,

Jeffrey M. Becker
