Classification Categories

Based on the Standards & Practices MOP,

- a) User – Individuals who are involved in using the type of product that is the topic of the standard, but who are not involved with the production or distribution of that type of product.

- b) Producer – Individuals who are involved in the production of the type of product. This includes individuals involved in the design, engineering support, manufacturing, testing, and/or marketing of the type of product; and who are employed by or represent a producer (manufacturer/vendor) of the type of product.
Note: A person who works for a company that purchases the product that is the subject of the standard and then transfers ownership of the product or an assembly that includes the product to an end user is not to be classified as a user.

- c) Regulatory/Government – Individuals who represent governmental entities having regulatory interest in or influence over the type or use of product.

- d) Testing/Certification/Approval – Individuals who represent organizations that provide testing, certification, and/or approval of the type of product.

- e) Architect-Engineer, Engineer-Constructors, Integrators – Individuals employed by organizations involved with the design of systems or facilities in which the type of product is used, including application engineering and engineering support for installation and use of the type of product.

- f) General – Individuals who do not meet any of the preceding interest categories. This may include, but is not limited to, experts from academia, professional associations, and experts who are retired or do not receive funding for their standards activities from any related organization.

Note: Individuals who might normally be classified as General per this definition could in some cases be classified more properly as one of the other categories, depending on their funding/support or other business arrangements pertaining to the type of product that is the topic of the standard in development. For example, a university professor who receives funding from a user company to serve on a standards committee should be classified as a user.
