101 Tips for a Successful Automation Career

Greg McMillan and Hunter Vegas
Contents

Acknowledgments ................................................................. v
About the Authors .............................................................. xii
Preface ............................................................................... xiii
Tip #1: Always Ask “Why?” – And Never Stop Learning ..................... 1
Tip #2: Always Note the Author of a Technical Article ......................... 3
Tip #3: Pain Is Instructive ....................................................... 5
Tip #4: Never Lie .................................................................. 7
Tip #5: Admit Your Errors ...................................................... 9
Tip #6: Change for the Sake of Change Is Not Always a Good Thing, but “We’ve Always Done It That Way” Is a Poor Reason to Avoid Trying New Things .... 11
Tip #7: If You Have to Tell Everyone How Smart You Are, You Probably Aren’t .......... 13
Tip #8: Never Underestimate the Power of Politics and Emotion .......... 15
Tip #9: The O-ring Seal in an On/Off Actuator Can Be a Good Predictor of Its Reliability .......................................................... 17
Tip #10: Butterfly Valves and/or Ball Valves with Positioners
Are NOT Control Valves! ........................................................ 19
Tip #11: The Good, the Bad, and the Ugly of Vortex Flowmeters ............ 21
Tip #12: The Good, the Bad, and the Ugly of Magmeters ..................... 23
Tip #13: The Good, the Bad, and the Ugly of Differential Pressure Flow Devices ..... 25
Tip #14: Capillary Seal Pitfalls ................................................ 27
Tip #15: You Cannot Control What You Do Not Understand ............. 29
Tip #16: Use Outlines and/or Flow Charts First ................................ 31
Tip #17: You Can Never Have Too Much Messaging .......................... 33
Tip #18: Cheap Instrumentation Is Exactly That .............................. 35
Tip #19: Always Run Spare Wires and Plan for Expansion ......................... 37
Tip #20: Spend the Money to Individually Fuse I/O with Indicating Fuse Blocks ...... 39
Tip #21: Too Many Alarms Can Be Worse Than None at All .......................... 41
Tip #22: Details Matter ............................................................................. 43
Tip #23: Anticipate Murphy; He Is Alive and Well ....................................... 45
Tip #24: When Performing a DCS Retrofit, Take Time to Study the I/O Cards .......... 47
Tip #25: Make Sure the Coffee Is Strong and the Pot Brews Quickly on Start-up .... 49
Tip #26: Document Your Code .................................................................. 51
Tip #27: Create, Thoroughly Test, THEN Replicate ....................................... 53
Tip #28: “Plug and Play” Devices Often Don’t ............................................. 55
Tip #29: Tricks for Control Panels ............................................................... 57
Tip #30: Appearance Matters .................................................................... 59
Tip #31: Project Management Is Really Risk Management ............................ 61
Tip #32: General Project Management Tips .................................................. 63
Tip #33: High Pay Is Great but Life Is Too Short to Stay in a Job You Dislike ........ 65
Tip #34: Take Time to Learn Exactly How Instruments Work ....................... 67
Tip #35: Operators Can Make or Break an Automation Project ..................... 69
Tip #36: A College Degree Does NOT Buy You Respect, Nor Is It a
Good Indication of What You Know .......................................................... 71
Tip #37: Get Past the References You Are Offered ....................................... 73
Tip #38: Derail Scripted Demonstrations ..................................................... 75
Tip #39: Know the Codes ......................................................................... 77
Tip #40: Engineers Are Generally AWFUL Communicators. 
Do Not Fall into That Trap ..................................................................... 79
Tip #41: If Possible, Get Plant Experience Early ........................................ 81
Tip #42: Money Drives Corporate Behavior ............................................... 83

viii 101 Tips for a Successful Automation Career
Tip #67: Find the Best Measurement Location ........................................ 133
Tip #68: Find the Best Valve Location .................................................. 135
Tip #69: Add Control Loops to Eliminate Manual Actions and Sequences .......... 137
Tip #70: Minimize Deadtime ............................................................... 139
Tip #71: Achieve Best Disturbance Rejection and Setpoint Response ............... 141
Tip #72: Achieve Best Loop Coordination and Optimization ......................... 143
Tip #73: Use Coriolis Meters for Mass Flow and Concentration Control ............ 145
Tip #74: Eliminate Split Range Oscillations .......................................... 147
Tip #75: Use Wireless Transmitters for Diagnostics, Improvements, and Metrics ... 149
Tip #76: Use Checklists to Cover All the Bases ....................................... 151
Tip #77: Increase the PID Gain and Reset Time for Vessel and Column Control ... 153
Tip #78: Decrease the PID Gain and Reset Time for Pipeline and Inline Control ... 155
Tip #79: Understand How Equipment and Operating Conditions Affect Process Dynamics ................................................................. 157
Tip #80: Use Sliding Stem Valves for Tighter Control ................................ 159
Tip #81: Select the Best Type and Size of Actuator for Tight Control ............... 161
Tip #82: Use and Tune Smart Positioners .............................................. 163
Tip #83: Don’t Use On-Off Valves for Control Valves .............................. 165
Tip #84: Use Signal Characterization in the DCS to Linearize Valve Installed Flow Characteristic ......................................................... 167
Tip #85: Use Linear Reagent Demand Control for Systems with Difficult-to-Control pH ............................................................... 169
Tip #86: Test the pH Response Time to Determine the Health of a Glass Electrode ................................................................. 171
Tip #87: Monitor the pH Offset to Determine the Health of a Reference Electrode ................................................................. 173
Tip #88: Use Middle Signal Selection to Improve pH Measurement Reliability ... 175
Tip #89: Identify Deadtime and Ramp Rate .......................................... 177

101 Tips for a Successful Automation Career
Tip #90: Compute and Trend a Future PV ................................................. 179

Tip #91: Use Output Tracking to Improve Setpoint and Abnormal Condition Response .................................................. 181

Tip #92: Make Reset Time and Feedforward Action Smarter ................. 183

Tip #93: Use a Viewable and Adjustable Flow Ratio and a Feedforward Summer ......................................................... 185

Tip #94: Smooth the Transition between Batch and Continuous Operations ................. 187

Tip #95: Use External-Reset Feedback for Cascade Control and Slow Final Control Elements .............................................. 189

Tip #96: Optimize Batch End Points and Cycle Times .......................... 191

Tip #97: Use Valve Position Control to Optimize Process Efficiency and Capacity ............................................................ 193

Tip #98: Achieve the Required Simulation Fidelity ................................ 195

Tip #99: Use a Virtual Plant for All Dynamic Models .............................. 197

Tip #100: Use an Enhanced PID for At-Line and Off-Line Analyzers ........... 199

Tip #101: Use Plant-Wide Feedforward for More Flexible and Efficient Production ......................................................... 201

Appendix A: References .............................................................. 203

Appendix B: Vintage Books ......................................................... 205

Appendix C: Checklists .............................................................. 206

Appendix D: Dynamics .............................................................. 223

Appendix E: Enhanced PID .......................................................... 229

Appendix F: First Principle Process Gains, Deadtimes, and Time Constants ................. 231
